Skills

Cybersecurity/Networking — Vulnerability assessment, malware removal, system hardening, network building, routing/switching, DNS, troubleshooting

Windows & Cloud Infrastructure — Active Directory, Windows Server, GPO, PXE/WDS Azure, Entra ID, IAM/RBAC, Resource Monitoring, Scaling Services

IT Support — PC repair, hardware diagnostics, Windows/Linux, System Recovery/Restoration

Professional Skills — Customer Service, Problem Solving, Teamwork, Decision Making, Time Management

Technical Experience

Freelance Technology Repair Technician | February 2025 - Present

Diagnose and resolve hardware, software, and network issues across Windows, Mac, and Linux systems, including laptops, desktops, gaming consoles, phones, and other client devices. Configure home and small-office networks, including router and workstation integration, and build custom systems based on client requirements. Perform malware and virus removal while implementing defensive measures to restore system integrity. Apply structured troubleshooting to identify problems, resolve technical issues, and restore system functionality.

Cyber Academy of Excellence Cyber Security Pathway | August 2024 - May 2026

Practiced file management, backups, and system recovery procedures while learning IT helpdesk concepts, including customer service, asset management, and support workflows. Studied networking fundamentals including the OSI model, routing, switching, wireless concepts, and network security. Applied cybersecurity principles through CIA Triad protections for data at rest, in motion, and in use, and hardened Windows systems by identifying vulnerabilities and implementing defensive configurations. Built and troubleshoot simulated networks using Cisco Packet Tracer while strengthening troubleshooting, communication, and technical problem-solving skills. Investigated compromised or malfunctioning systems and restored functionality through structured troubleshooting.

Active Directory Lab

Designed and implemented a Windows Server Active Directory lab environment using Oracle VirtualBox, including domain controller setup, DNS configuration, and user/group management. Configured Group Policy Objects for centralized management and simulated corporate network scenarios for hands-on administration and troubleshooting practice.

Classroom Network Diagnostics & PXE Deployment

Diagnosed and resolved Ethernet connectivity issues across classroom workstations, performed PXE booting to deploy operating systems via network imaging using Windows Deployment Services, and applied switch configuration, troubleshooting, and OS deployment skills; additionally, installed RAM in servers and racked systems alongside network switches to ensure proper integration and connectivity.

Certifications

CompTIA Security+ (SY0-701) Certification

Education

Cyber Academy of Excellence - May 2026 | GPA: 93.67

Cyber Security Program

Richmond County Technical Career Magnet School - Expected May 2027

Cisco Networking Academy Python Essentials 1 Certificate

Volunteer Experience

Be Pro Be Proud | Student Mentor

Guided students through simulated skilled-trade career activities, troubleshoot malfunctioning physical and software-based simulators, and assisted school board faculty and staff with event activities and technical issues.
